FYI – this is one of the things we need to talk about. Talking at RDT is fine, maybe we can meet over lunch on the 3rd? Angela will not make it to RDT, it will just be me from Oklahoma.

Thanks!
 Amy

Subject: Elevated Blood Lead, (b) (6) Residence, Wilcox Superfund Site

Bart,

On November 18th, 2014 I received a call from Mr. (b) (6), an on-site resident at the Wilcox Oil Company Superfund Site. Mr. (b) (6) expressed concern about the health of his oldest son, age 6, who recently had blood lead testing performed. The results, according to Mr. (b) (6) were 6 micrograms per decileter (µg/dL).

According to the ATSDR Fact Sheet, Lead-ToxFAQs (CAS#7439-92-1) results of blood lead testing that are above 5 µg/dL are considered elevated.

Per our phone conversation earlier today, EPA recommends soil sampling of the (b) (6) property, however I looked into this, and DEQ's Management Assistance Grant that DEQ operates under for the Wilcox site does not provide funding for environmental sampling.

9828757

DEQ is very concerned about the health of on-site residents. DEQ requests EPA follow up with the concerns of Mr. (b) (6) and take appropriate action as necessary.

Thank you,

Todd Downham
